

Wood Lattice Top Instructions

Install your lattice pieces on top of top runners.

Make sure that lattice pieces are running the opposite way of your top runners.

You should be able to make lattice pieces flush on all four sides of your top runners.

Install with one end on center of the center top runner and other end on the outside top runner.

Your lattice piece should be cut to length so that in the center you should be able to butt your lattice pieces together on center top runner.

Fasten with 2½" screws.

Fasten with three screws on each end of your lattice and then two on every runner they cross.
